

Improved accuracy,  
precise patient care.

## A pathway that benefits physicians and patients.

The CT-Flow pathway gives physicians access to more precise information to effectively diagnose patients with coronary artery disease.<sup>1</sup> By identifying functional disease other non-invasive tests overlook, CT-Flow helps facilitate better patient outcomes.<sup>1,2</sup>

## Robin's Story

Robin presented with a history of persistent chest pain and repeated negative SPECT tests. After 13 years of symptoms, her physician recommended the CT-Flow pathway and identified significant disease that required invasive treatment.

The HeartFlow Analysis is a personalized cardiac test indicated for use in clinically stable symptomatic patients with coronary artery disease. The information provided by the HeartFlow Analysis is intended to be used in conjunction with the patient's clinical history, symptoms and other diagnostic tests, as well as the clinician's professional judgment. Patient symptoms must be documented in the patient's medical record. While no diagnostic test is perfect, the HeartFlow Analysis has demonstrated higher diagnostic performance compared to other non-invasive cardiac tests.<sup>1</sup> If you are a patient and suspect this test may be right for you, please speak with your doctor.
